Manage Quantity and Quality of Grain directly from the combine

CROPSCAN AGRIMATICS CART WEIGHT SCALES INTERGRATION LICENCE

CropScanAg and Agrimatics have partnered together to provide a unique solution to managing grain from the combine harvester. The quality i.e. CropScan Protein, Oil, Starch and Moisture data and quantity i.e. Libra Cart Weight data, of each grain tank can now be read directly into the CropScan Logistics Software

The data from the Libra Cart Weigh Scale is read via Bluetooth into the CropScan3300H display when a grain cart pulls alongside the combine. A proximity sensor mounted on the combine's out loading auger triggers the CropScan Logistics Software to automatically read the grain cart weight as the auger is extended. When the auger returns to its cradle, the CropScan Logistics Software automatically reads the grain cart weight again and populates the grain tank weight in the Grain Logistics screen.

Together the CropScan 3300H and the Agrimatics Libra Cart Weighing System provide an accurate measurement for Quality and Quantity for each grain tank. The real-time data gives farmers better tools for blending grain and meeting contacts. A licence key is required to unlock this function. The kit includes: Low Energy Bluetooth Reader and Licence Key.
