

## MEASURE MANAGE GROW

**Manage Quantity and Quality of Grain directly from the combine**

### CNHI CANBUS INTERGRATION LICENCE

The CropScan to CNHI CANBUS Integration allows users to log the Yield data along with the Protein, Moisture and Oil data into the CropScan display. The CANBUS Integration enables the CropScan to generate yield maps and automatically populate the grain tank weight in the CropScan Grain Logistics screen thereby improving the grain transfer weight functions. The CANBUS integration feature brings the quality and quantity attributes together to improve on-farm grain logistics and nutrient management planning for the next harvest.

The CropScan display scans the CANBUS messages every second to automate the CropScan operation reducing user interaction and simplify the CropScan display operation.

Kit includes, CropScan Display to J1939 CANBUS interface cable, software licence registration key,
